

MYNOKE VERMICAST

for maize crop application

MyNOKE Vermicast is pure humus rich earthworm casting and most effective organic fertiliser/soil conditioner.

Vermicast is ideal for light soils by providing humus. It is rich in:

- Humus
- Bacteria
- Humic Acids
- Calcium
- Microbes
- Growth Promoters
- Fungi
- Enzymes to unlock phosphate
- Micorrhiza
- Cation Exchange Capacity

A carbon to nitrogen ration of 15, 13% calcium, 1.4% nitrogen, plus minerals, micro-organisms, micorrhiza, fungi and enzymes.

All these not only stimulate plant growth, but unlock unavailable nutrients stored in the soil.

Pure Earthworm Casting

Advanced Organic Fertiliser

Proven Soil Conditioner

Promotes Root Growth

Unlocks Soil Fertilisers

Increases Water Holding Capacity

Increases Soil Organic Matter (SOM)

Growth Topsoil

Promotes Soil Microbiological Activity

vermicompost  earthworms  vermicomposting

MyNOKE Vermicast improves nutrient availability in the soil. The mature humus in Vermicast has a high cation exchange capacity at 100% base saturation. This means the soil will store more nutrients such as calcium, potassium, magnesium, ammonium, sodium, plus trace elements much longer. Less nutrients are leached out of the root zone. The high calcium content in the Vermicast will lift the soil pH.

**Average Nutrient Content*
of MyNOKE Vermicast**

Humus	36%
Carbon	24%
Nitrogen	1.4%
C/N Ratio	15
Phosphate	0.7%
Calcium	13%
Magnesium	0.21%
Sulphur	0.51%
pH	7.0-7.2

*based on dry matter

Application rates will vary according to soil conditions and crop rotation. Consult with our MyNOKE team.
